
Suddenly, lost lightbox rounded corners!

Posted by jimcapraro - 2010/09/19 15:00

the lightbox looked beautiful until a couple of days ago, now the nice rounded corners around the outside lightbox frame have disappeared. Check it out by going to CDwebsites.net and clicking on any of the websites in the front page gallery and you will see what I mean.

Any help on restoring the nice rounded corners of the lightbox frame would be greatly appreciated.

Hello,

Download and re-install 'ARI Sexy Lightbox' module. This should help.

okay will do; but, I didn't use the ari sexy lightbox module, I used the aria sexy lightbox plug-in to create the content on the home page that appears in the lightbox. Knowing this, do you still think that downloading and re-installing the module will help?

Yes, upgrade of the module should help. This issue occurs because titles are not defined. The plugin uses javascript files from the module because upgrade the module.

upgrading the module alone didn't work, so I uninstalled the module and three plug-ins, and then re-installed all four from a fresh download. That did the trick and it works well now
