# Showing images from folder
Posted by wesbajt - 2010/11/15 10:05
_____

Hi!
I want to have a link on a article page that shows images from a certain folder as lightbox. Something like this:
Se pictures from party!!

How??

_____

Hello,

Use the following code:

{arisexylightbox activeType="imglist" dir="PATH_TO_IMAGE" type="customtext"}Show gallery{/arisexylightbox}

Where PATH_TO_IMAGE is path to folder with images. For example if images are located in /images/gallery/my_gallery folder, use the following code:

{arisexylightbox activeType="imglist" dir="images/gallery/my_gallery" type="customtext"}Show gallery{/arisexylightbox}

Regards,
ARI Soft

Hello,

In this case, is it possible to put a describing text under each picture as I can do for a single picture
{arisexylightbox}{/arisexylightbox} ??
Best regards.
Dominique,

_____

Image captions can be placed into CSV file. Sample of CSV file you can find by the following path:

/modules/mod_arisexylightbox/arisexylightbox.csv

It has the following format:

"File","Title"
file_name,title

For example if you want to enter titles for image_01.jpg and image_02.jpg files, create the following CSV file:

"File","Title"
image_01.jpg,"Caption 1"
image_02.jpg,"Caption 2"

and place it to folder with images. By default the module uses arisexylightbox.csv file, but it can be changes with help "Description file" parameter.

_____

Hello again,

I've put the csv file in the directory with big images but I don't see any text under the pictures.
Here's a copy from the csv file:
"File","Title"
1.jpg,"Dans le module Columbus"
2.jpg,"Le siÐ¸ge multi-axes"
3.pgj,"Le mur d'impesanteur"
4.jpg,"La salle de rÐ¹union"
5.jpg," gffg "

Where could be the problem ?
Thanks in advance.
Dominique,

_____

Hello,

Thanks for correcting the csv file but where was the error ???
I had added " before and after the word "File" as I've seen in this forum here under : "File","Title"

Another thing : It seems this file doesn't accept all the accentuated chars ...
It accepts the "Ð¹" but not the "Ð¸"; this one is replaced by "Ð""
Do I have to save the csv file in UTF-8 ?

Best regards.
Dominique,

_____

CSV file should contains two columns: "File" and "Title". Your CSV file was messed up. If you use non-English characters save CSV file in UTF-8 encoding without BOM. This information can be found in "Description" field on module settings page. On this page you can also download sample CSV file and use it in CSV editor for creating new CSV file.

Regards,
ARI Sot

_____

hello,

YES, it works perfectly.
As I said a few minutes ago, what a support !! ;-)

Is it possible to change the words 'prev.', 'next' and 'close' ?
I want to translate them in french.

Best regards.
Dominique,

_____

The extension uses images for navigation and close buttons. We can provide PSD source file with these buttons.

_____

Hello,

Yes, I'm interested to receive the PSD files to be able to edit prev. next and close ...

As all is working for showing images from all a folder, I would like to know how to be able to display in an article just 2 or 3 pictures from a folder (not all pictures) ?
I've put this code:
{arisexylightbox}{/arisexylightbox}
and a few lines below : {arisexylightbox}{/arisexylightbox}

Is it possible to have a shadow under the thumbs like for the gallery and to display next, previous, close and play ?

It seems the code above is not correct for what I'm searching to do ...
Best regards.
Dominique,

## Re:Showing images from folder

_____

Hello,

We have sent PSD source by email. If you want to show only several images from folder and show other images in lightbox, use the following code:

```
{arisexylightbox activeType="imglist" dir="PATH_TO_IMAGE_FOLDER" visibleItemCount="3"}{/arisexylightbox}
```

Specify visible items count with help "visibleItemCount" parameter. If you want to create thumbnails for images in content, it doesn't require to wrap each image with {arisexylightbox} and {/arisexylightbox} tags. You can wrap all content with images with these tags and set "single" attribute of {arisexylightbox} tag to "0" that group images into gallery. The code will look like:

```
{arisexylightbox thumbWidth="250" single="0"}
  content ... content ...

  content ... content ...

  content ... content ...
{/arisexylightbox}
```

Currently it is impossible to choose theme for inline image, but will add this ability in a future release.

Regards,
ARI Soft
