
Lightbox in every image

Posted by borat - 2010/12/07 11:38

Hello Ari Team

I am trying to set up Ari Sexy Lightbox in my website.

I would like to use it as an image gallery in some articles.

I have just installed the module and the three plugins in the zip file.

After my customization, I achieved to present an image gallery in an article (using a specific folder with them)

The problem is that every image in every article is now working with Ari Sexy Lightbox and I wouldn't like to do so.

I would like only to present a specific image folder in an article.

Any help is well appreciated.

Hello,

Could you provide link to page where we can see this issue and temporary access to your Joomla! backend by email?

PS: Do you the latest version of the extension (v. 1.6.4)?

Regards,
ARI Soft

Thank you for your instant reply!

The latest version solved my problem.

As I can see, the mod_arisexylightbox & plg_system_arisexylightboxanywhere are only needed for doing this I want in my website.

After installing plg_system_arisexythumbnails, every image in my website works with lightbox effect.

So I don't need the last one.

Thank you again and keep on!

"ARI Sexy Thumbnails" is used that create smart thumbnails. You can insert image into an article, resize it with help standard a WYSIWYG editor ability and the plugin create thumbnails for this image with lightbox effect. If you don't need this ability, don't install the plugin or disable it.
