
Description file for Picasa?

Posted by peterva - 2011/02/18 15:55

Hi, I use the aricolorbox anywhere plugin to display a Picasa album. This works fine, the only thing is that instead of the photo caption, the popup show the image filename (e.g. 20080121_1568.JPG).
Is there a way to show the Picasa captions? Or can I load a description file (e.g. descrFile="media/captions.csv"? Thanks for letting me know!

Hello,

Download and upgrade "ARI Colorbox" module please. New version shows image caption instead of file name if it is entered.

Regards,
ARI Soft

Almost there.

I have downloaded aricolorbox v 1.7.1 from the members area and installed it. When I use 'simple gallery' or 'single image' as a gallery template, the module works perfect. It displays the album title and in the popup it displays the captions from Picasa.

But (and this is what I want) when I use 'picasa albums' as a gallery template, it shows the album name in the thumbnails (this is ok) but in the popup, I get the image file names. So no captions then.

Is there a solution for this? Thanks.
