
Styling to single image

Posted by elamedia - 2012/02/14 10:35

Hi there,

I would like to know if it is possible to style a single image on the layout type, single image.

The only thing this perfect module lacks is styling to the images.

Can this be done?

Regards

Hello,

It is possible to wrap value in "Layout type -> Single image -> Template" parameter with HTML code. For example:

```
{ $data:colorboximage }
```

The support level is very fast, thank you.

Please take a look at my screenshot, it applies that to the whole box model and not the image.

It is possible to add a CSS class to tag and use it to create necessary CSS rules. For example use the next code:

```
{ $data:colorboximage }
```

and add the next CSS rule to a site template CSS file:

```
DIV.my_image IMG  
{  
  border: 1px solid red;  
}
```

Hi there,

Its not applying to the image does not matter if i use my own css.

I want to apply to the image and not the box element.

An when i use my own class the popup does not work.

It seems this is a problem with site template. Could you provide a temporary access to your J! backend by email so we can investigate this problem?
