
Image linked to webpage

Posted by bgpilot1 - 2010/03/21 06:48

I have a module that only contains one image. I want to the user to click on the image and have the colorbox open to a webpage. How do I do this?

Or, can I have the webpage display as a thumbnail in the module and when clicked open in the colorbox? Using Joomla 1.5

Hello,

If you want to display external page by click on image with "ARI Colorbox" module, open module settings page, configure main parameters, choose "Remote Content" in "Choose type" dropdown and enter in URL link to external page and in "Link text" parameter the following code:

where `is path to your image.`

PS: You can also use "System - ARI Colorbox Anywhere" plugin if want to use the extension in content instead of use it as module.

Regards,
ARI Soft

Hello,

I tried it with the module and it worked. But I don't know the syntax for the ARI colorbox Anywhere plugin. I tried the following, but it didn't work:

```
{aricolorbox activeType="rcontent" opt_width="300" opt_height="250" url="http://www.google.com" link=
title="Google"}{/aricolorbox}
```

What's wrong? Thanks.

Hello,

Use the following code:

```
{aricolorbox activeType="rcontent" opt_width="300" opt_height="250" url="http://www.google.com"
title="Google"}{/aricolorbox}
```

Sorry, but it still doesn't work. To confirm that the ARI colorbox Anywhere plugin is installed correct I tried the following code and this works.

```
{aricolorbox activeType="rcontent" opt_width="300" opt_height="250" url="http://www.google.com" link="Show google site" title="Google"}{/aricolorbox}
```

Any other idea? Thanks.

Hello,

Could you provide temporary access to your Joomla! backend by email that we can investigate this issue? Because code which provided before works fine on our test server.
