
Allowed memory size

Posted by guyman95 - 2011/07/21 09:56

Hi,

I get this error message :

Fatal error: Allowed memory size of 100663296 bytes exhausted (tried to allocate 12544 bytes) in
/home/www/.../web/.../.../modules/mod_ariprettyphoto/includes/kernel/Image/Asido/class.driver.gd.php on line 448

I hope you could help.

Thanks in advance.

Hello,

Try to install PHP Settings plugin and increase value of "memory_limit" PHP option.

Hi,

Plugin downloaded and installed. I have set the plugin like this :

```
pcre.backtrack_limit=-1  
memory_limit=500M  
max_execution_time=1000
```

But I have always the same error message.

For information I have 3 other pages with the pretty photo module enable and they are working without problems.

I only have a problem on one page.

I hope that you could give me a solution.

Best regards.

Is it possible to provide temporary access to your J! backend by email and link to page where we can see the problem that we can investigate the issue?
