Install Java Script for changing thumbnail look

Posted by eraz - 2011/08/11 21:39
_____

I would like to use a java script that add's a reflection to pictures. Is it somehow possible, to get pretty photo working with it, so that the thumbnails which pretty photo is showing will be edited by this script first?

the code would be:

We can't provide exact answer because we don't how your reflection script is implemented.

It's just a normal Java Script, which is activated via index.php.
If i want to add an reflection, i have just to append the line class="flec height35 ropa45" to the HTML code of an embedded image.

All i need to know now is, if i could add this little code at the point where ARI Pretty Photo is creating the thumbnails and where i can find this part of code in Pretty Photo.

We can not guarantee that it will work because we don't know what your script to do with images. We can recommend to check it on simple image. For this install, configure and enable "System - ARI Pretty Photo" plugin and insert the next code into an article:

Where PATH_TO_THUMBNAIL is path to thumbnail.

Ok, this is working, see here (last pic)
http://www.spotcatch.net/

How could i add this for a gallery, not just for a single pic? (of course i understand, that you can not guarantee that it is working ;))

thanks for helping!

_____

Download and upgrade "ARI Pretty Photo" module and "System - ARI Pretty Photo Anywhere" plugin. New version contains new parameter "Simple gallery -> Image class". You can enter CSS classes for image in this parameter.

GREAT!! Seem's like it is working :)

But i think it does not apply the options that i give the class (hight and opacity). When writing in the field "Image Class" "reflect height100 ropa55" (without quotes) the skript is using his default values? Maybe you could tell me how to solve this little issue, than i would be very happy... :woohoo:

_____

Could you provide temporary access to your Joomla! backend by email that we can investigate the issue? Currently only "reflect" class is added to images.

_____

Try now please.

PS: Correct CSS classes for your reflection script are "rheight100 ropacity55".

Oh, sorry for this stupid mistake :unsure:

Thanks a lot for your help! :)
