Overlay Thumnails

Posted by GoToon - 2011/09/09 12:05

_____

Hello !

I have a problem with the gallery thumbnail.

Is it possible to move down the gallery in order to display it somwhere else ?

Besides, how can I change the background color for the thumbnail gallery ? I set the Overlay color to #000000 in "System - ARI Pretty Photo", but it's still white (on my whites pages, it's not good looking...)

Could you help me, please ?

Thanks !!

_____

Hello,

If necessary to change location of thumbnails, it requires custom modification . About background, if you mean background of images which are loaded into the lightbox, this background is defined in images (they are saved with white background) and it is not related to the lightbox.

_____

OK for the background, I thought it was grey in some pictures I saw...

For the location, could you tell me in which file I have to work in order to move the thumbnails please ?

Or maybe it is too hard for someone who doesn't know how to code properly... :huh:

Thank you !

_____

See \modules\mod_ariprettyphoto\includes\js\jquery.prettyPhoto.min.js javascript file. This is minified file, original version of the file can be found in install\source folder in mod_ariprettyphoto.zip archive.

_____

Hello !

I didn't modify the .js file. Finally, I did it on CSS :
DIV.pp_gallery
{
  margin-top: 9px;
}

But there is a problem when a portrait picture is shown: the gallery overlays to the navigation buttons on left and the "close" button on right...
And in this case, no choice: I suppose I have to modify the .js file to set the proportion of gallery...
But I think it's too hard for me...

Thanks anyway.

_____

Modification which you need requires to change javascript file, not only CSS file.
