
Flickr thumbs - problem

Posted by ktg138 - 2011/10/21 12:45

Hi,

I'm new ARI Pretty Photo Anywhere user but I have a little problem. Is it possible to create only 6 thumbs from Flickr photoset but after clicking on any thumb be able to see whole photoset ?

If I set "Image count" parameter to 6, then it loads only first 6 photos. I need something like "Single image" gallery mode, but with 6 thumbnails where I have limited number of thumbs but I can see whole photoset.

Regards,
KtG

Hello,

Add visibleItemCount="6" parameter to {ariprettyphoto} tag.

Hmm, it works but only for "simple gallery" layout. For "advanced gallery" it didn't work :(

Re:Flickr thumbs - problem

Posted by admin - 2011/10/21 13:19

Yes, "visibleItemCount" parameter for "Simple gallery" layout only. The extension doesn't support described ability for "Advanced gallery" mode.

Posted by ktg138 - 2011/10/21 13:31

So what now ?

I need simple effects like border and shadow around thumbs. And maybe more important, I need to remove image title visible at bottom of all thumbs. In advanced layout it was simple but in simple layout I don't know how to remove this titles, and where add new CSS classes for borders and shadows...

Template for "Simple gallery" mode is located in
\\modules\\mod_ariprettyphoto\\includes\\kernel\\PrettyPhoto\\Models\\Templates\\class.SimpleGalleryTemplate.php file. You
can modify it for your needs.

Re:Flickr thumbs - problem

Posted by ktg138 - 2011/10/25 14:45

Ok, it seems to works but:

- 1) Plugin allows me to set only medium 500px or large 1024px image size, but Flickr have also 640px option between them... Is it possible to set it or add this option to your plugin ?
 - 2) visibleItemCount="6" parameter shows only 6 thumbnails but, i think, it loads/creates thumbs for all images from Flickr photoset and after that shows first 6. When I have more big galleries on one page, plugin is loading/creating PLENTY thumbs for long time. Is it possible to set it to load/create only 6 thumbs ? And other stuff only when it's needed ?
 - 3) Plugin provides only 3 speeds of animation, is there an option to disable animation ?
 - 4) It doesn't work on IE7 (IE6 probably too, but works with IE 8,9 & 10), but information on product page says that it should work with IE6+. I don't care about IE6, but my boss works with IE7 so what should I do to make it works ? Is it possible or not?

About questions 1, 2 and 3, download and upgrade "ARI Pretty Photo" module and "System - ARI Pretty Photo Anywhere" and "System - ARI Pretty Photo" plugins (if you use them). After this clean browser's cache. New version of the extension provides the next abilities:

1. Select "Medium (640px on longest side)" size for Flickr images.
2. Doesn't load hidden images.
3. Set "Animation speed" parameter to "- None -".

Regarding to question 4, the extension supports IE 6+. Probably a conflict with a 3rd party extension on your site. We will investigate this issue and report about results soon.

Sorry, but could you provide a link to a page where we can see a problem in IE 6?

Ok, thanks a lot. Now my browser loads only ~100 elements, not ~500 like before :)

Link: <http://tinyurl.com/6arsx35> . It's still some kind of beta version of page so maybe you're right, it's may be a conflict with a one or more 3rd party extension, but at this moment I don't have idea with which extension...

Currently IE7 seems to load every picture from Flickr but doesn't display any, it displays only background from lightbox. And thumbnails on content page, of course.

The lightbox works fine in IE 7 emulation mode. See screenshot below please:

Yes, the lightbox works fine in IE7, but yesterday:

- a) I updated module & plugins
- b) I disabled every extension that uses jQuery.

So, now I need to lunch every extension, one by one and figure out what was wrong but is it possible to turn off loading of jQuery libraries into your plugin options but instead load it in head of my Joomla template ? It's could help, and solve all problems - but how to do it, and is it possible ?

=====

Re:Flickr thumbs - problem

Posted by admin - 2011/10/26 13:59

Yes, you can disable jQuery loading in the module/the plugin settings and load it only once in site template file or with help 3rd party extension. BTW, if the problem returns, contact us and provide a link to a page where we can see it that we can investigate it.

Hmm, it's looks that there is a conflict with Art Image Cycle from Artetics.com... I'm using it as top banner rotator and when:

- a) Ari Pretty Photo (APP) jQ is enabled AIC (with disabled jQ) works fine, but only on pages with galleries

- b) When AIC jQ is enabled then APP (with disabled jQ) doesn't work with IE6 & 7
c) When I added jq 1.6.4 into head of my site template, APP works fine, AIC doesn't work.

So, I think it's all fault of AIC, and I need to ask AIC for help or find another banner rotator.
Sorry for trouble and thanks a lot for help, support and very cool extension :)

Re:Flickr thumbs - problem

Posted by admin - 2011/10/26 14:39

As possible solution, you can use ARI Image Slider module. It is our free image slider extension.

Hi, again. If the latest version of the ARI Pretty Photo Anywhere plugin supports all sizes of images from Flickr ?
Especially I care about the medium 800x600 :)

I have 1.6.3, and it's supports only medium 640x480 :(

=====

Re:Flickr thumbs - problem

Posted by admin - 2012/05/21 11:18

Hello,

Download and upgrade "ARI Pretty Photo" module and "System - ARI Pretty Photo Anywhere" plugin. The latest version of the extensions supports "Medium (800px on longest side)" image size.

Regards,
ARI Soft

Re:Flickr thumbs - problem

Posted by ktg138 - 2012/05/27 17:58

Ok, thank you for that update, but this time I have more serious problem... I cannot load for flickr images uploaded before March 2012... Plugin can download thumbnails but cannot load images after clicking on thumb... instead of a picture, Flickr image appears: "This image or video is currently unavailable" :(

Sets uploaded after February 2012 are ok.

Can you help me with it ?

EDIT:

It could be problem with new resolution 800px... after setting back 640px it works all fine again :]

Hello,

Yes, it seems this is a problem with the new resolution because support of this resolution has been added by Flickr recently and it applied it for new images.

Regards,
ARI Soft
