
Linked images with Pretty Photo?

Posted by JanBengt - 2011/11/01 10:29

Hi,
I'm looking for a Joomla 1.6 plugin that allows me to create a simple partner logo gallery. There are two main requirements: 1. It must be easy for a publisher to manage the gallery (add new and remove logos). 2. You should be able to add a URL for each logo image (leading to the partner's homepage). Does ARI Pretty Photo meet those requirements?
/Jan

Hello,

"ARI Pretty Photo" is compatible with J! 1.6, can show images from specific folder(s) and supports ability to define title and description for images in a CSV file, but it doesn't provide ability to link images with external links with help CSV file, but this ability is supported by "ARI Sexy Lightbox" extension.

Regards,
ARI Soft
