## how to implement the code?

Posted by Lindiman - 2012/02/07 18:39

---

Hello

I am trying to integrate the code below to the "spotlight-code" of the tool "Spotlight" by YOOtheme.com (<http://www.yootheme.com/widgetkit/examples/spotlight>).

The idea is to have a picture on the site and when I move the mouse over it, Spotlight fades in an overlay with the description "Fotogalerie". On click, the ARI Pretty Photo gallery should popup.

The initial code for Spotlight is (as shown in the Yootheme examples):

Custom Overlay

and that's the code to implement (which works absolute great for itself):

```
{ariprettyphoto activeType="imglist" dir="images/Galerien/Gartengestaltung" type="customtext"}{/ariprettyphoto}
```

I've tried several variations but nothing seems to work.

Is this possible in any way?

I would be very grateful if somebody could help!

Lindiman

Hello,

Could you provide a link to a page where you try to integrate "ARI Pretty Photo" with spotlight addon?

Regards,  
ARI Soft

Hello and thank you for the very quick response.

You could have a look at <http://server55.hostpoint.ch/~jasmineh/jasminehuber.ch/index.php/gartengestaltung>

ARI Pretty Photo is already integrated. The picture on the left is actually with a description below (made with the JCE Editor plugin Caption) which should be replaced with the "Spotlight" if this is possible.

Of course YOOtheme had a gallery too and a combination with Spotlight works, but your gallery is so much better and prettier.

To combine the code should be possible anyhow (I think so), but this exceeds my knowledge.

What do you think?

Regards,  
Lindiman

---

Try the next code:

```
{ariprettyphoto activeType="imglist" dir="images/Galerien/Gartengestaltung" type="customtext"}Custom  
Overlay{/ariprettyphoto}
```

Hello

WOW!

The code works perfect :woohoo:

absolut marvelous!!!

I thank you very very much for your help!

Great software - best support :)

Best regards,  
Lindiman
