
lightbox window not covering the whole screen

Posted by eliecer - 2012/08/01 18:55

Hi guys,

As the subject says, pretty photo lightbox window is not covering the whole screen.

My new website design is fragmented in 3 pieces (3 divs)

<http://goo.gl/8RyLm>

When I use pretty photo on the top div, or bottom div, the lightbox window covers the whole screen, but that doesn't happen when I use it inside the div located at the center of the page.

Any possible solution?

This is the link: website

Hello,

It seems this problem with "position" CSS property for DIVs. The extension can't with this HTML layout.

Regards,
ARI Soft
