
How to display thumbnails for multiple albums

Posted by sealeyr - 2013/03/25 16:55

Hi all,

Apologies if this is a dumb question. I've just bought ARI Pretty Photo because I want to display some photo albums on a Joomla site. I have about 12 albums and I wanted to display a grid with a thumbnail image for each of the albums so that when I visitor clicks on one of the images, they get the rest of that album in the lightbox - via navigation. Is this something that Pretty Photo can do or have I bought the wrong thing.

If it can be done, can anyone suggest how. I'm trying to achieve something like on this site - <http://www.spectrumphotobooth.com/gallery.htm> and if anyone knows how to do the password thing that would be REALLY great.

Thanks all.
Rob.

Hello,

If you want to show one image from an album and then show all images into the lightbox, you can use the following plugin code for "ARI Pretty Photo Anywhere" plugin:

```
{ariprettyphoto activeType="imglist" dir="images/stories" thumbWidth="150" type="singleimage"}}{/ariprettyphoto}
```

It requires to use a new plugin code for each album.

Regards,
ARI Soft
