
How to create an isolate image thumbnail?

Posted by mackonly - 2011/01/19 01:41

Hi,

I was wondering how can I create an isolate thumbnail image using Ari Fancybox Anywhere, I tried something like this:

```
{arifancybox activeType="singleimage" dir="pathofimage" generateThumbs=true thumbType=resize}/{arifancybox}
```

But it did not work, is it possible?

Thank you

Hello,

Yes, it is possible. Use the following code:

```
{arifancybox}/{arifancybox}
```

or the next code:

```
{arifancybox thumbWidth="250"}/{arifancybox}
```

Where PATH_TO_IMAGE is path to image.

PS: You can find description of this ability in "How to create thumbnails for images in content?" section on "System - ARI Fancybox Anywhere" plugin settings page.

Regards,
ARI Soft
