## Close fancybox by JS function call

Posted by marcowiese - 2011/01/28 12:58

---

Hi,

which function have I to call if I want fancybox to close?

\$.fancybox.close() -> doesn't work for me...

Thanks and best regards

Marco

Hello,

Try to use the next code:

```
(window || jQuery).fancybox.close();
```

If it doesn't work, provide link to page where we can see this problem please.

Regards,

ARI Soft

Thanks for your quick response!

Unfortunately it doesn't work. I get the following js-error:

Fehler: jQuery is not defined

Quelldatei: http://qs.geocaching-

nrrw.de/ext/mitcachezentrale/actionMczEvent.php?action=comment&gcnrw\_pid=YTozOntzOjY6Im1jel9pZCI7czoxOilxIjtzOjY6ImVzZXJfaWQiO3M6MjoiNjMiO3M6OToidXNlcl9uYW1lIjtzOjExOiJLcsO8bWVsYnJvdCI7fQ==%27

Zeile: 8

Be advised: The content of this is not Joomla! It's an external PHP script.

I call fancybox as follows:

```
class="arifancybox iframe {width: 800, height: 450}"
```

Everything works fine, but the fancybox should be closed, if the form shown in the box is submitted. After this, the parent window should be refreshed. The js-code called after form is submitted:

```
echo '(window || jQuery).fancybox.close();parent.location.reload();';
```

Unfortunately the site is not available for public. If you need access, let me know your mailadress and I will send you the login.

Best regards

Marco

If you want to call "close" method from , use the following code:

```
(parent || parent).fancybox.close();
```

This works, great!  
Thank you so much, you made my day.

Best regards  
Marco
