
Ari Fancybox Anywhere - Thumbnails:

Posted by dimps1 - 2011/04/21 10:52

I'm trying out Ari Fancybox in Joomla 1.6 using Fancybox Anywhere to insert a gallery into an article.

Everything seems fine except:

I'm trying to set the thumbnails display, using the Fancybox Anywhere pluggin options:

Image Gallery / Generate Thumbnails: yes:

Create thumbnail method : Resize

Create thumbnail Method: Fit to viewport = OK

Create Thumbnail Method: Crop to Viewport = Does not work, but it works fine in Joomla 1.5.

My gallery has both vertical and horizontal pics, so the thumbnails of the vertical pics look look awful.

Any ideas? http://www.ari-soft.com/images/fbfiles/images/Sprite_7.jpg

Hello,

Could you provide plugin code which you use and screenshot of plugin settings page or provide temporary access to your Joomla! backend and link to page where you try to use the extension by email?

Regards,
ARI Soft

Just in case anyone else has this issue...

The problem is solved - and it had nothing to do with Ari Fancybox.

At the same time, I was having issues with JCK Editor 3.4.6 which was giving a whole lot of problems with not being able to insert images into an article, create text links to another page, JTree not showing etc.

Turns out I did not have the stable version. Installing the stable version solved all my problems and the thumbnails in Fancybox are now displaying correctly.(3.4.6_stable)
