ARI Fancybox Table Problem

Posted by sheigl - 2011/06/30 19:20

Hi, I'm having a problem with inserting multiple instances of the fancybox codes within an article. I have one displaying a gallery within a table, then one that's supposed to display another joomla article. If the gallery is by itself on the page it works perfectly, but as soon as I insert the other code anywhere else on the page inside or outside of the table, it seems like it cripples the rest of the page and restricts the entire page's table. Here is my HTML code for the article.

Avani

{arifancybox activeType="imglist" generateThumbs="true" thumbType="resize" thumbHeight="50px" type="gallery" theme="shadow" dir="images/stories/gallery/horses/avani"{/arifancybox}
Gulch x Royal Strait Flush by Seattle Slew
'08 Indian Charlie colt brought $ 300,000 at Keeneland Sept!

View Pedigree

Open

{arifancybox activeType="article" opt_width="300" opt_height="250" id="79" link="Show article" title="Article"}{/arifancybox}

Here's the link to the page I'm working on.

Hello,

Provided code works fine on our test server. Could you provide temporary access to your J! backend by email that we can investigate the problem?

Regards,
ARI Soft

As additional to previous post, provided code contains error. Use the next code:

{arifancybox activeType="imglist" generateThumbs="true" thumbType="resize" thumbHeight="50px" type="gallery" theme="shadow" dir="images/stories/gallery/horses/avani"}{/arifancybox}

instead of:

{arifancybox activeType="imglist" generateThumbs="true" thumbType="resize" thumbHeight="50px" type="gallery" theme="shadow" dir="images/stories/gallery/horses/avani"{/arifancybox}

In other words original code doesn't contain } symbol for {arifancybox} tag.
