
Combining FancyBox Gallery with Inline Content

Posted by samflash - 2012/07/17 13:37

Hello,

I am interested to know whether it is possible to combine a Fancybox Gallery as seen here with Fancybox Anywhere:
<http://cloudiscope.com/index.php/wood-floors/solid-timber>
with it linking to Linked Article like seen here when you click on the 1st 'Interior 1' Thumbnail image seen here:
<http://cloudiscope.com/index.php/flooring/wood-floors>

This loads a Joomla Article in Fancybox. What coding does this require or is it possible?

Kind regards,

Sam

Hello,

Sorry for the delay. Do you want to create and show thumbnails for images from specific folder(s) and if a user clicks by a thumbnail show an article into the lightbox? If yes, currently the module doesn't support this ability.

Regards,
ARI Soft

Download and upgrade the module. New version supports ability to define a link which will be loaded into the lightbox when a user click by auto-created thumbnail in "Link" column in CSV file. For this place arifancybox.csv CSV file in folder with images and user the next format:

```
"File","Title","Link"  
img01.jpg,"","index.php?option=com_content&view=article&id=ARTICLE_ID1&tmpl=component"  
img02.jpg,"",  
img03.jpg,"","index.php?option=com_content&view=article&id=ARTICLE_ID2&tmpl=component"
```

Where ARTICLE_ID1 and ARTICLE_ID2 are ID of articles which you want to load into the lightbox.

Regards,
ARI Soft
