
Can't get Fancybox to work...

Posted by sysproj - 2013/09/26 18:46

Hi,

Just installed it in Joomla 2.5, enabled everything, following the examples, I can't get anything to work!
Can you give me a simple example to try?

Hello,

What exactly doesn't work (you see nothing, plugin code or something another)? Do you want to use the module or "System - ARI Fancybox Anywhere" or "System - ARI Fancybox" plugin?

Regards,
ARI Soft

I have a Joomla php page where I show a single image. ()
What I want to do is wrap the above code in {arifancybox} with a chosen layout (ie shadow),
and when the user clicks on the image, a Large Fancy pop up is shown.

How can I do that?

Could you please show me the script?

If you want to create a thumbnail for a single image and show an original image into the lightbox, "ARI Fancybox Anywhere" plugin can be used. The code will look like:

```
{arifancybox activeType="inlineimg" thumbWidth="150"}  
  
{/arifancybox}
```

Where LINK_TO_IMAGE is a link to an image.

Themes can be used when images are shown from specific folder(s).
