Customizing Ari Carousel and Ari Fancybox

Posted by acrocephalus - 2013/11/15 16:59

_____

Hello,
Take a look at this site:
http://www.innocom.cat/index.php/mostreshttp://www.innocom.cat/index.php/mostres

These are my questions:
1) How can I make the title look like the title below?
2) How can I get rid of the unwanted {$emptyText}?

Then, I'd like it to integrate into Fancybox lightbox. I have both of them enabled, but they don't seem to be working. Can anyone give me a detailed explanateion o how to do it? Finally, the module should be published as an article (see the text just below the module), not inside that article, how can I do it?
Thanks!

Dani

_____

Hello,

Install, configure and enable "System - ARI Fancybox" plugin.

If you don't use "ARI Fancybox" module, disable it (it should resolve the problem with {$emptyText} message, it seems "ARI Fancybox" module is enabled, but not configured).

If you want to show only the module into an article, you can create an article and load the module into created article.

Regards,
ARI Soft

_____

Thank you for your quick reply. However I'm quite new to Joomla and I still have some (stupid) questions:
1) How do I configure the Fancybox module? I was sure I had already done it.
2) How do I load the module into an article?
3) Do I have to use both modules (Carousel & Fancybox) at the same time?
Thanks again!

Dani

_____

Hello,
I managed to load the module inside the article, however Fancybox does not seem to be working. I'd like it to pop-up the clicked image. I attach the current Fancybox settings. Can you help me?
Thanks,

Dani http://www.ari-soft.com/images/fbfiles/images/Innocom___Administration___Module_Manager__Module_mod_arifancybox.png

_____

Specify what do you want to show with help of "ARI Fancybox" module and send the screenshot of module settings by email because the attached screenshot has a bad quality.

Regards,
ARI Soft
