# Fancybox Anywhere - content width from print CSS

Posted by dimps1 - 2014/09/30 15:29

_____

I've noticed recently that Ari Fancybox Anywhere content is taking it's width from the print CSS file. When this 1000px wide, the content of the modal window has a horizontal scroll bar thrown in that width. How do I overide this just for Fancybox?
Thanks

_____

Hello,

Site template styles for "print" ("component") layout is used only if Joomla! content (for example article) is shown into the lightbox and this problem with site template styles for "component" layout. It requires to modify site template styles in this case.

Regards,
ARI Soft

Thanks for your speady reply. I suspected this. Until now I've simply removed the print body minimum width, and it's worked. However, with this site, it throws out my printing view on other pages. I've created a module with that content and it works just fine.
