## Can i do this with ARI Fancybox

Posted by johnny@ejs.dk - 2016/07/01 11:41

---

Hi there

I have two things i am trying to figure how to do!

- 1) load article in Fancybox - from Joomla Menu ? (It works fine from link in article).
- 2) I wish to let Fancybox use entire screen (Fullscreen).

Is there ways around this ?

Sincerely  
Johnny Ejs

Hello,

1. It is possible with help of "ARI Fancybox Links" plugin. If you provide a link to a page with menu item which you want to open into the lightbox, we will help to configure the plugin.

2. Set "Width" and "Height" parameters to 100%.

Hi Again

My site is behind firewall and internal only but i have made this demo site that pretty much should explain what I intend to do.

The site is: <http://cold.dokumenteret.dk/index.php>

Click the <http://cold.dokumenteret.dk/index.php/dkpweb/dkp-01> menu and there is some explanation.

Let me know if You need access behind.

Sincerely  
Johnny Ejs B)

Do you want to open the lightbox when a user clicks by "!" icon? Currently it doesn't work because HTML code should look like:

```
class="arifancybox iframe {width: '100%', height: '100%}'"
```

instead of:

```
class="arifancybox iframe {width: 100%, height: 100%}"
```

Point taken, i have corrected, but not my issue.

The Upper right corner with the ! works as intended - and just to show where I want to go.

I can only make this happend by making the user click a link.

I want the user to activate a MENU and then the Fancybox should invoke !

Is that possible ?

Johnny

Do you want to open the lightbox when a user clicks by "DKP 01" menu item?

Yes

Actually the user is a kiosk chrome browser that auto login / start using the url.

Install, configure and enable "System - ARI Fancybox Links" plugin. Populate "Elements CSS selectors" parameter with the following value:

"#menu .item-104>A"|tmpl=component|width=100%&height=100%

Thanks it works - and I understand the logic now.

BUT :dry:

It does not work when the browser load with the link as 'start page'

Is that the end of line ?

Johnny

Could you explain what you mean under "start page"?

Like bookmark / favorit or home in the browser.

Try to click here: <http://cold.dokumenteret.dk/index.php/dkpweb/dkp-01>

In my case i start Chrome from a shortcut that has this line:

"C:\Program Files (x86)\Google\Chrome\Application\chrome.exe" --kiosk  
"http://cold.dokumenteret.dk/index.php/dkpweb/dkp-01"

Sincerely  
Johnny Ejs

It is possible to open the page into the lightbox when a user clicks by menu item (link). It is not possible to open it into the lightbox when the page is loaded directly into a browser.
