## Updates to your plugins

Posted by alisamii - 2010/09/06 02:00

---

Hi:

Is there some way that you can implement a "update" system for your plugins and modules?

You are very active in updating and adding new features to your plugins based on user requests, and it is difficult to try and stay up to date with your pace.

I use Joomla!art's extension manager which allows me to maintain a repository of plugins and their updates. They have made a developer api so that extension developers may create an update server and allow users one-click access to updates and their eventual installation. The developer guide is here:

[http://wiki.joomlaart.com/wiki/JA\\_Extensions\\_Manager/Developer\\_Guides](http://wiki.joomlaart.com/wiki/JA_Extensions_Manager/Developer_Guides)

It would be very helpful

Hello,

Thank you for your suggestion we'll investigate possibility to use this update API with our extensions.

Regards,  
ARI Soft
