Mysterious BR tags showing up

Posted by WINEMAN - 2010/09/07 00:52

_____

Thanks so much for your quick responses to the community.

I noticed today that the anywhere plugin (or module - not sure which one) creates
 tags before and after the thumbnail container. Any way to remove this?

They appear regardless of whether I choose Simple Gallery or Advanced Gallery so it must be embedded somewhere in the code, right? :blush:

_____

Could you provide link to page where we can see it? By default the module doesn't add tags.

Regards,
ARI Soft

Thanks for the follow-up.
We've recently discovered that the Ari Fancybox plugin is incompatible with the JReviews component that we're currently using. Both use JQuery and when the ARI plugin is enabled in "Everywhere" mode, JReviews malfunctions.

We're not sure where the
 tags are coming from but for now we have to unfortunately disable the ARI plugin until we can find out if JReviews and ARI can work together.

_____

If you provide link to page where we can see conflict between 'ARI Fancybox' and 'JReviews' we can help to investigate this issue.

Very kind of you to ask.
To which email address should I sent the link? I can't post it a forum.
