
Fancybox module anywhere not appearing

Posted by tedhawkes - 2010/10/05 13:15

I'm using fancybox to display a number of custom HTML modules within articles, but the clickable link doesn't show up. It works great when I set activeType to "inline", but breaks when it turns to "module". I have the mode set to "Anywhere" in the plugin, but to no avail! Any ideas?
