
error when enabling fancybox anywhere

Posted by aximdesign - 2010/11/10 03:37

Fatal error: Cannot redeclare class AriSimpleContentPlugin in
D:\wamp\www\lq2\administrator\components\com_arismartcontent\kernel\Components\AriSmartContent\Plugins\class.SimpleContentPlugin.php(18) : eval()'d code on line 1

This only happens when I enable Fancybox Anywhere plugin, regular fancybox works when this is disabled. When I enable it, the whole site crashes.

Joomla 1.5.10 on WAMP server with PHP 5.2

Please HELP! I am under deadline to finish a site tonight.

Thanks

Hello,

Check that you use the latest version of "ARI Smart Content" (v. 1.7.5).

Regards,
ARI Soft

I am using the standalone version of the Fancy Box plugin without Smart Content.

Could you provide temporary access to your Joomla! backend by email that we can investigate this problem? We suppose that not the latest version of "ARI Smart Content: DataTable Pack" is used on your site because the latest version doesn't contain "AriSimpleContentPlugin" class.

Regards,
ARI Soft
