
sometimes images and sometimes no images

Posted by jpeters - 2011/08/23 21:57

Hello,
i am currently working on a new website and want to use this module.
i have several menu items and on every menu item i load a different module.
now on some menu pages it works great, but with some menu items it does not work.
i have assigned every module to its own menu item..

even when i assign a working module also to a menu item that does not work, it still does not work on that menu item.
but it still works on the default menu item..

it looks like it's trying to load the image.. but keeps trying (round thing turning)..

image files are okay..
i have tried several settings to make it work.. tried a copy of a working module.. server jquery plugins.. nothing seems to help..

Hello,

Provide link to page where we can see the problem.

Regards,
ARI Soft

Hi,
can you give me an e-mail address where i can send all the info (url, backend credentials, etc)..

This is not "ARI Image Slider" problem. On gallery and link pages javascript error occurs. It is raised by extension which is used for disabling right mouse click because MooTools library is not loaded. We can investigate this problem in more details if you provide temporary access to your J! backend by email.
