Solution to Sexy Lightbox and Slide Show problem

Posted by jrmann - 2012/05/28 02:55

_____

Hi ARI Support,

I wanted Image Slide Show and Sexy Lightbox on the same page (but separately). However, on opening the page I received an undefined index: simplegallery at line 377 of class.ThumbnailProvider.php in the ARI Sexy Lightbox folders.

The solution was to replace this with the class.ThumbnailProvider.php from the Image Slide Show package, which has revised code which ignores the lack of parameter simplegallery.

I hope this assists someone.

By the way, have you sorted out the problem of Image Slide Show stopping in Firefox, please?

Best regards,

John

_____

Hello,

Download and upgrade "ARI Sexy Lightbox" module please. It should resolve the conflict between "ARI Sexy Lightbox" and "ARI Image SlideShow".

We also sent updated "ARI Image SlideShow" module by email.

Regards,
ARI Soft
