## Ari Image Slider caption

Posted by technofast@hotmail.com - 2013/12/01 08:23

---

I created ariimageslider.ini file.

```
images/panorama1054by188.jpg="Lake Ontario"  
images/edmond1054by188copy.jpg="Alps Mountain"
```

saved it as a text file.

When i tried to upload this file to joomla 3  
it said it is not supported  
where is the folder called images/slider  
do we have to create the folder?

Otherwise image slider is working great  
thank you  
George

Hello,

Use only file names in INI file, without folder and sub-folders. Link to sample INI file can be found in "Description" section on module settings page. INI file should be located in folder with images.

If you want to upload INI file via Joomla! media manager, open "Options" on media manager page and add INI file extension to "Legal Extensions (File Types)" parameter. Files can be loaded also via FTP or using a file manager extension like eXplorer.

Regards,  
ARI Soft
