
No images showing when using Flickr

Posted by davieb - 2010/06/04 19:02

Hi,

I seem to be having problems getting the images from Flickr to appear when using the module. Currently I just get a black background.

I am using Joomla Version 1.5.15 and I've attached a screenshot of the module settings. The API key is a new one created just for this module. The bar on the top of the slideshow on the webpage reads 0 of 0.

The slideshow is currently active on the ABOUT page on my site www.davidbrennan.co.uk

Thanks in advance

David <http://www.ari-soft.com/images/fbfiles/images/settings.jpg>

Hello,

Could you provide temporary access to your Joomla! backend by email that we can investigate this issue because everything works fine on our test server with your settings.

Regards,
ARI Soft

Try now, please. It was a conflict with 'Flickr' module because 'ARI Image SlideShow' and 'Flickr' module use the same library for working with Flickr, but 'Flickr' module uses old version of this library. We have adjusted 'ARI Image SlideShow' that it can with old version of Flickr library too.

That works a treat, thanks very much.

Another problem has now raised it's head though. For some reason the module seems to be resizing the images to fit the module size rather than keeping them as they should be

for example, I currently have the module size set at 400 wide by 300 high with the small (240px on longest side) being selected from Flickr. However, when the module shows the image it makes it fill the space so an image that at small size is 167px by 240px it becomes 400px by 300px which distorts it badly. If I make the module 240px by 240px (to match the

longest edge size) it still resizes them to fit the space.

How do I stop the module from resizing the images?

=====

Currently the module doesn't provide possibility to save original images size, but we'll adjust it and add new option which will help to change this behaviour. We'll implement this feature within 2 days. Sorry for inconvenience.

Regards,
ARI Soft

That will be brilliant. In the meantime I can have a play around with the various settings and transition effects.
