
error message in frontend by using ari image slide

Posted by pixelschupser - 2014/05/24 13:48

Hello Support Team

I have now a new problem with ari image slideshow.

At the moment i'm testing the new version from joomla, but only on my macbook, so there is no way that you can do a login on the server. as template there is working allrounder a template version which was created for joomla 3. On frontend I can see that the module is running but it shows an error message. You can see the error message in the file which i have send with this email. Here is the error message:

Warning: explode() expects parameter 2 to be string, array given in /Applications/XAMPP/xamppfiles/htdocs/stick-fabrik/modules/mod_arislide/show/includes/kernel/ImageSlideshow/class.ImageSlideshow.php on line 115

I can't find nothing about this problem in your excellent forum

For the ari cloud carussel where i had also an error, i found the solution in your forum. But for this problem I need your help. There is nothing to find in google for this problem.

I hope you can help me, with my problem.

kind regards

Hansjörg Lauble

Hello,

Check that you use the latest version of the extension.

Regards,

ARI Soft

Hello Support

Yes you are on the right side of the bits & bytes jungle.

I had a old version 1.5.3 from dec 2013.

I have now installed the version 1.5.4 and all functions

thank fpr your very good and fast help to my problem.

kind regards

Hansjörg Lauble B)
