module load images slowly
Posted by claudiotegazzini - 2010/06/22 04:25
_____

Please visit wwww.giancarloabeni.it
You can see in home page an use of your extension.
It don't start immediately when a user load homepage.
There images of 23 KB (min) and of 93 KB (max).
Do you need username and password to control if I mistake ?
Or the I must use image of smaller dimemnsion ?
Thanks
Claudio

_____

Hello,

This issue occurs because the image folder contains not image files which have image extensions. These are the following files:

._foto01.jpg
._foto02.jpg
._foto03.jpg
._foto04.jpg
._foto05.jpg
._foto06.jpg
._foto07.jpg

You can remove these files or if you need it for something reason, you can set "Files filter" parameter in module settings to:

^+.*\.(jpg|gif|jpeg|png|bmp|JPG|GIF|JPEG|BMP)$

Regards,
ARI Soft

Thank you very much for your help.
How you have saw that in the folder there were ._xxxx.jpg files (that they are file generated by MAC) ?
Claudio

_____

We have investigated your page with help FireBug plugin for FireFox browser and found that the module trid to load not image files because they have incorrect extension.

Regards,
ARI Soft
