
Joomla 3.5 and air Image slide show crash site

Posted by saucerman - 2016/03/22 13:51

there seems to be a problem with these two not mixing correctly, as when blended together the site crashes

see this thread

<http://forum.joomla.org/viewtopic.php?f=710&t=913707&p=3379145#p3379145>

it has something to do with the input.php file under the joomla filter and it's compatibility with the slider

Install the latest version of the extension (2.2.0). It is working fine with Joomla! 3.5.0. The extension is available here.

Okay, I tried the new version, the images are loaded within the source page but I just get a small black box with a spinning progress circle and no pictures.

any clue?

appreciated

It sounds like a javascript conflict occurs on the page. Could you provide a link to a page where the problem occurs so we can investigate the problem in more details?

This problem with "swmenu" module. It loads own copy of jQuery library instead of using jQuery instance which is loaded by Joomla!. It causes javascript errors with Joomla! javascript code and prevents execution of "ARI Image Slider"

javascript code.

mucho gracia....that was indeed the culprit....thanks for you help. I disabled the jquery on the menu system and now everything is right with the world

appreciated

thanks for pointing in the correct direction....I have my pictures BUT no captions

I notice the style for

```
#ais_109 {  
    width: "100%";  
    height: "auto";  
}
```

that if I change this in firebug to height: "100%" the captions come back....

where in the code can this be done?

appreicated

Where we can see the problem? The page which you specified before still contains the problem with swmenu.
