
After update to 3.5

Posted by dsalchow - 2016/03/24 20:07

Hello,

I updated my Joomla site to the newest version and also the arisilder but now no images are displayed any more. Do you have any idea why? The settings are the same as before.

is only buffering

Best regards,

Dirk

I am using PHP7

The problem here was the cookie accept plugin!

Not not yet resolved for an other site. Do you have any idea why this can be happend?

Thank you very much in advance

Hello,

It is not a problem with "ARI Image Slider" extension. This problem with your site template on your another site. The site template uses own copy of jQuery library instead of using jQuery instance which is loaded by Joomla!

Hi,

thanks. But is the same tmpl only the header image was changed.

Best regards,

Dirk

You can open HTML source of the page and see that jQuery library are loaded twice. The second time it is loaded by site template.
