
Display images\' modified time on description

Posted by Arus - 2020/05/26 16:33

Hi, I'm displaying images on a folder and I managed to show their name on description thanks to \$baseFileName variable.

Is there any variable to display their last modified time?

Something like this: "16:30"

I'm trying to use images name (it's their date written like this "photo20205-163045.jpg") stripping first characters (extension is already stripped by \$baseFileName), but I'd have to modify a module file... is there a way to do it being update safe?

If there's any other way please tell me.

Best regards,

Mario

Hello,

The extension doesn't support this formatting.

Regards,

ARI Soft
