Display images\' modified time on description Posted by Arus - 2020/05/26 16:33

Hi, I'm displaying images on a folder and I managed to show their name on description thanks to \$baseFileName variable. Is there any varbiale to display their last modified time? Something like this: "16:30" I'm trying to use images name (it's their date written like this "photo20205-163045.jpg") stripping first characters (extension is already stripped by \$baseFileName), but I'd have to modify a module file... is there a way to do it being update safe? If there's any other way please tell me. Best regards, Mario

Hello,

The extension doesn't support this formatting.

Regards, ARI Soft
