
Pre Purchase Popup Question

Posted by awthentik - 2011/02/12 18:16

Hi guys,
Does ARI Popup support multiple article galleries?
For example: Category Blog Entry 1=Gallery load images/folder1
 Category Blog Entry 2=Gallery load images/folder2
 etc etc

I would like to be able to upload images to different folders per blog layout and insert that popup gallery into each blog individually without conflict when loaded into a category blog layout.

Hello,

Yes, multiple instances of the extension can be used without problem.

Regards,
ARI Soft

For example can be created new "ARI Image Popup" module instance for each gallery or use "System - ARI Image Popup Anywhere" plugin, code will look like:

```
{ariimagepopup activeType="imglist" dir="images/folder1"}{/ariimagepopup}
```

Regards,
