
Lightbox behind image

Posted by stewstew - 2011/06/23 02:15

i have embedded a youtube video in an iframe just below the ImagePopup gallery of thumbnails in a particular article.

when i click one of the thumbs, the lightbox displays properly, however, the lightbox is behind the embedded youtube video on the article page.

how do i get the lightbox to show on top of all elements of the article page?

Hello,

It seems YouTube video doesn't contain `wmode="transparent"` attribute.

Regards,
ARI Soft

apparently what i did was add `"?wmode=transparent"` code right after the youtube url and it works fine.
