## ARI Image Pop Up

Posted by shaun - 2011/08/03 17:43

---

I built a page that has 15 images on it. When you click one of the images the pop up should appear with the slides but it doesnt.

I have made an article and included your snippets of code and assigned the article to a menu item which is one of the images on the said page that i built.

When you are on the home page and click a link to take you to the built page with the images and then click on the image to see the slides, it goes to the article page but shows the snippet of code.

I hope that this makes sense.

When i get to the page with the link to access the pop up - this appears <http://www.ari-soft.com/images/fbfiles/images/Capture-2d183dacdc0e0b2dfa16da2141a7c084.GIF>
