
Image Popup via specific URL

Posted by cjjrik - 2018/12/23 10:06

1. I want to popup different Image Popup Galleries via an URL in that form, that user can show different galleries via different URLs.
2. The pictures for each gallery should be load from different folders.
3. Each picture should have a description.

How can I do this, what must I customize?

Best regards,

Chris

Hello,

The following shortcode can be used for "ARI Image Popup Anywhere" plugin to show images from /images/album folder:

```
{ariimagepopup activeType="imglist" dir="images/album"}{/ariimagepopup}
```

Image descriptions can be defined in CSV file. Place it into folder with images. It has the following format:

```
"File","Title"  
image_01.jpg,"Title 01"  
image_02.jpg,"Title 02"
```

Regards,
ARI Soft

Does it mean that I can use the Image popup in different articles and not only in one Gallery?

Different shortcodes can be used in different articles or in the same article.

I see, ARI Soft.

What must I do if I want to open the Gallery out of a link? Please see <http://prntscr.com/lzlurm>

Now, there is an URL to another site, but what must I do to open the ARI Gallery with this code out of a link?

Best regards,
Customer

It is only possible to open the popup when click by a thumbnail or show only the first image which triggers the lightbox.
For this the following shortcode is used:

```
{ariimagepopup activeType="imglist" dir="images/album" type="singleimage"}{/ariimagepopup}
```

Regards,
ARI Soft
