
ARI Sexy Lightbox Lite

Posted by easysymbol - 2011/02/12 10:29

Good morning,
maybe the answer is already here but i didn't find it.

I've installed the plug-in and then activated it.

I use JCE wysiwyg, how can I link a word in my article to another article and show it in a lightbox?

Sorry in advance if my ask is typical... but I really didn't find any instructions about.

Thanks for your help

Hello,

Code will look like:

Show article

Where ARTICLE_ID is ID of article which you want to show into lightbox. For example, if ID of necessary article is 73, use the next code:

Show article

Regards,
ARI Soft

Thanks for your reply.
I've copied and pasted your code on the article and then changed the ID with one of the articles I have.
The result is that the shadow appears but about the box, I can see just the left up round corner.

Could you please tell me what's wrong with it?

Really thanks for your help again.

Could you provide link to page where we can see this issue? If it is private, you can provide it by email.

Regards,
ARI Soft

Sorry, forgot to describe "TB_iframe", "width" and "height" parameter. Link should look like:

Show article

Where "width" and "height" parameters are used that define size of the lightbox. BTW, disable "Content - Email Cloak" plugin, it uses obsolete javascript code which causes problem in article which you try to load into the lightbox.

Regards,
ARI Soft

It works absolutely great :)
Perfect plug-in and support!

Thanks!
