Lightbox under code problem Posted by daverosen - 2011/03/30 04:02
The lightbox is working great, but one thing I've noticed with many pictures and code on the site I am working on, is that it is always going under any items such as a youtube video, and some pictures set with PHP/Javascript code. How to fix? http://www.ari-soft.com/images/fbfiles/images/lightbox_prority_problem.jpg

Hello,
Check that () tag for videos have "wmode"="transparent" parameter (attribute).
Regards, ARI Soft
