
ustream and ari sexy lightbox

Posted by iecus - 2011/06/19 19:23

Hello guys, I would like to know if there's away to take a ustream live embed code and make it into a lightbox

I tried using the module and tried just using this <http://www.ustream.tv/broadcaster/2549049> put it didn't work so I tried the anywhere plugin and and content with this code and it still didn't work. I would love someone to help me figure this out. This is for a church and what I would like to do is have them click on a picture and the video will pop up to play.

Hello,

ustream provides access to video only for registered and logged users on their site. Guest users are redirected to registration page.

Thanks for your reply. I'm not sure I understand you mean.

Here's the direct location of the video on my site

ustream video

on the front page

main page

where it shows the image for live stream. I just want to be able to click on that link and get the ustream to show up in the lightbox.

Can this be done? Or is there a video player I can add the ustream ID to in order to make this work.

thx.

If you use "System - ARI Sexy Lightbox Anywhere" plugin, use the next code:

```
{arisexylightbox activeType="rcontent"  
url="http://www.ustream.tv/flash/viewer.swf?flashvars=autoplay=false&brand=embed&cid=2549049&v3=1" width="480"  
height="296"}{/arisexylightbox}
```

where PATH_TO_IMAGE is path to image which will be used as link to video.

If you use "System - ARI Sexy Lightbox" plugin, use the next code:
