
Calling sexylightbox from a flash actionscript

Posted by tresrans - 2011/10/05 20:01

Hi,

Trying to have a button in a flash file open external content or an article within the rel of sexylightbox on my joomla site

actionscript for flash button:

```
navigateToURL(new  
URLRequest("http://www.server.com/images/locations/operations.html?TB_iframe=true&height=500&width=525  
rel=sexylightbox"));
```

in firefox it opens the html file to a new tab

in IE it does nothing but mock me....

help,

thank you

Hello,

"ARI Sexy Lightbox" uses javascript and the lightbox can be open if call appropriate javascript code. Your code do the same if a user enters a link into a browser address bar.

Something along these lines?

```
function openNewWindow() {  
    popupWin = window.open('http://www.server.com/images/locations/operatio...ht=500&width=525 rel=sexylightbox',  
    'open_window',  
    'menubar, toolbar, location, directories, status, scrollbars, resizable, dependent, width=500, height=525, left=0, top=0')
```

or do you have a better solution in mind?

thank you

Do you use "ARI Sexy Lightbox" or "ARI Sexy Lightbox Lite"?

Javascript code looks like:

```
SexyLightbox.show("Caption", "http://www.google.com?TB_iframe=true&width=500&height=500", "");
```

PS: Check that plugin javascript files are loaded on necessary page.

hello again,

have tried this...

```
function fl_ClickToGoToWebPage_2(event:MouseEvent):void
{
    navigateToURL(new URLRequest(SexyLightbox.show("Operations",
"http://www.server.com/images/locations/operations.html?TB_iframe=true&height=500&width=525", "")));
}
```

```
this
function fl_ClickToGoToWebPage_2(event:MouseEvent):void
{
    navigateToURL(new URLRequest(SexyLightbox.show("Operations",
"http://www.server.com/images/locations/operations.html?TB_iframe=true&height=500&width=525", "")));
}
```

and this

```
function fl_ClickToGoToWebPage_2(event:MouseEvent):void
{
    navigateToURL(new URLRequest('SexyLightbox.show("Operations",
"http://www.server.com/images/locations/operations.html?TB_iframe=true&height=500&width=525", "")));
}
```

do I need to have the module installed or will this work with lite?
or is my code messed up?

when source is viewed these are loading...

thank you for your assistance

Sorry, we can't help with ActionScript, but we suppose your code is incorrect. "SexyLightbox.show("... is javascript code, it is not a URL.

aware that SexyLightbox.show is not a URL - in flash you can pass a call to javascript modules from the webpage but I can't make it work with your code yet... you had indicated SexyLightbox.show was a javascript function so was trying to call it from within flash..

do you have any method or function documentation available for SexyLightbox?

thanks

Provided JS code works fine. For example you can run it in javascript console in FireBug addon for FireFox browser. Original source of js file can be found in "install/source" folder in plg_content_arisexualboxlite.zip archive.
