
Integration with Slick Gallery

Posted by isosquare - 2011/10/30 22:17

Hi,

I've installed the Sexy Lightbox Lite a few hours ago and it doesn't seem to be doing a lot.

I'm not quite sure why exactly this is the case but I can tell the following:

- although the package seems to have installed correctly, there is no indication of a script in the source code that might belong to the Sexy Light Box
- I've selected Sexy Lightbox as the Lightbox of my choice in the Slick Gallery config but the rel="sexylightbox" attribute doesn't show up in the source code either

I'm running joomla 1.6 on this site.

=====

Hello,

"ARI Slick Gallery" extension can be integrated with ARI Sexy Lightbox extension, but it doesn't support integration with "ARI Sexy Lightbox Lite".

Regards,
ARI Soft
