Lightbox Doesn\'t Load

Posted by tbaron - 2011/11/28 21:23

_____

I've copied and pasted the example code onto page, but for some reason the lightbox doesn't load. In the case of loading another website, the website loads--but not in a lightbox. Instead, it loads in the whole window. In the case of loading HTML, nothing at all happens.

See for yourself here.

Thanks for the help!
Timothy

_____

Hello,

Open plugin settings page, set "Include jQuery" parameter to "Yes" and re-save plugin settings.

Regards,
ARI Soft

_____

The parameter was already set to "Yes." I set it to "No" and then reset it to "Yes." And guess what, it works now. I'm not sure why that worked, but thanks for helping!
