## Multiple Galleries

Posted by joseharm - 2011/12/03 23:59

---

I'm using ARI sexy Lightbox (NOT Lite). I need to know how to present several different galleries of pictures on the same page. I thought i could do that using the scan subfolders but all that does is add the subfolder content into a single display.

I'd like to be able to title the different galleries so users can select which one they want to view.

Hello,

If you use "ARI Sexy Lightbox" module, you can create several instances of "ARI Sexy Lightbox" module and loads necessary gallery in each module instance. Information how to create a new module instance can be found [here](#).

You can also use "System - ARI Sexy Lightbox Anywhere" plugin and place the next code into an article:

```
{arisexylightbox activeType="imglist" dir="PATH_TO_IMAGE_FOLDER" thumbWidth="200"}{/arisexylightbox}
```

Where PATH\_TO\_IMAGE\_FOLDER is a path to image folder(s). For example images/photos or images/photos;images/albums

Regards,  
ARI Soft
