how to customize lightbox theme
Posted by cerhio - 2012/01/30 09:35

_____

Hallo!

I want lightbox content to be displayed on yellow background. When i look through HTML there're parts with styling like this

so how can i restyle lightbox and what file generates this code?

thank you

_____

Hello,

If you want to change background of "#SLB-Contenido" element, use the next CSS rule:

#SLB-Contenido
{
 background-color: yellow !important;
}

Additional CSS properties are set by javascript code from
/plugins/content/arisexylightboxlite/js/jquery.sexylightbox.min.hs file.

Regards,
ARI Soft

_____

thanks for anser.

css code you provide works for html content, but creates yellow square over the picture when i open any image in lightbox.

so i applyed it to #SLB-Image.

Next step i found and colorised images in sexyimages directory.

Now i need only to change borders color. Java is out of my mind, a cant find there ... em... code looks like shineese for me.

i need to change border-colors here in generated html

please, help

_____

thanks for your support, as i see, this part of sexylightbox is not "usercustomizeble", so i'll keep things like they are.

"+" goes to support team carma =)
