
Sexy Ltbx lite not working rite with ARI tables

Posted by studebaker1925 - 2012/03/28 14:45

I have the paid version of Ari Tables and the Lite version of Sexy Lightbox. Embedded in a CSV file I have links to images. When paginated using the table settings (for example, 12), when the thumbnails on the first page are clicked, the image pops up correctly in a pop-up. If you go to the second page, then the images open in the window and not in a pop-up.

If the pagination is changed in the table settings to say 48 so all the thumbnails appear on the same page, then clicking them works correctly.

I have set up a page with two tables using the same CSV file, one with 12 rows per page, the other 48 and you can see the difference (go to the second page for the first table). The page is here: <http://www.automaxionltd.com/co-crystal-formers.html> You have to register (thorugh the login/out menu) to see this page.

The attached shows the setting for the tables which is the only difference between the two tables. <http://www.ari-soft.com/images/fbfiles/images/AriAri.png>

It doesn't work because "ARI Sexy Lightbox Lite" is initialized on page load, "ARI Table Sorter" change table elements dynamically when page is changed so new element is not associated with the lightbox.

You can use "ARI Data Table" widget instead of "ARI Table Sorter".
